

Pioneer in Gems & Jewellery Certification Service

IIGJ Lab is a project by GJEPC- Gem & Jewellery Export Promotion Council, which is sponsored by Ministry of Commerce & Industry, Govt. of India.

IIGJ Lab Highlights

✓ Unbiased, independent reports of gemstones, diamonds, pearls and jewellery by experienced gemmologists to ensure every report meets international standards.

✓ Equipped with advanced instruments like FTIR, UV-Vis-NIR, Raman Spectroscopy, EDXRF, LA-ICP-MS, and Synth Detect to name a few.

✓ Reports are globally recognized, ensuring trust and credibility for traders, retailers, and consumers.

✓ On-site jewellery certification for convenience of manufacturers and retailers.

✓ Quick Turnaround Time.

Jewellery Certification

A Project of
GJEPC
INDIA

Sponsored by Ministry of Commerce & Industry
Govt. of India

Diamond Jewellery Grading

Mounted diamonds are assessed for quality through detailed colour and clarity evaluation across the full D–Z colour scale. Prior to grading, every jewellery piece undergoes advanced screening to establish whether the diamonds are natural, lab-grown, or simulants, ensuring accuracy and reliability.

Diamond Jewellery Screening

Identification of natural, lab-grown diamonds and simulants studded in jewellery including jadau jewellery, using state-of-the-art screening technology.

Diamond and Coloured Stone Jewellery

Every gemstone set within a jewellery piece undergoes verification to confirm its identity. For jewellery containing multiple gemstone types, a single comprehensive report details each stone's colour and variety. Mounted diamonds are screened to separate natural diamonds from lab-grown or simulant, followed by evaluation of their colour and clarity grades.

NEW

On-site Jewellery Certification

IIGJ Lab offers on-site testing services designed for retail stores and manufacturing units for fast and reliable jewellery verification without moving the inventory off-premise. Mobile laboratory setup brings advanced instrumentation and qualified gemmologists directly to the client's location ensuring convenience and security.

Coloured Stone Jewellery

All gemstones, including polki-diamonds mounted in a jewellery piece are tested to verify their identity. For pieces containing more than one type of gemstone, a single consolidated report is issued, listing each stone along with its colour and variety name. Treatments like glass-filling, dyeing and coating are also reported.

For jewellery containing multiple rubies, sapphires, or emeralds, a detailed report is offered that specifies, for each stone, whether treatments such as heating or fissure filling are present or absent.
